

SAMPLE CERVICAL CANCER RADIO PUBLIC SERVICE ANNOUNCEMENT:
60 SECONDS

Hello, this is NAME, TITLE OF ORGANIZATION and I'm here to share an important message with the women of NAME OF COUNTRY/STATE/CITY (CHOOSE APPROPRIATE OPTION).

We now have the tools to prevent cervical cancer!

In case you haven't heard, cervical cancer is caused by the human papillomavirus, or HPV. This is good news, because finding the cause is the first step in fighting the cancer.

With new combinations of Pap testing, HPV testing, and HPV vaccines, no woman should suffer or die from cervical cancer. Every woman and girl must know about these prevention methods and have access to the tools that are appropriate for them.

This year, 250,000 women worldwide will die from cervical cancer. But with the new methods of HPV testing and vaccination, cervical cancer can be prevented.

It's up to us to spread the word to our mothers, daughters, sisters and friends, because *no woman should die of cervical cancer.*

Learn more by joining the Global Consortium of Women to End Cervical Cancer at [www \[dot\] globe women \[dot\] org](http://www.globe.women.org).
